This document must contain hologram seal to prevent unauthorised duplication.

WGI™ Gemological Analysis is based on strict standards and internationally accepted grading techniques which the laboratories are committed to. Using professional equipment and terminology, this report represents a gemological opinion and does not serve in any case as a guarantee or warranty. Thermal enhancement refers to heating and is the most common treatment for the majority of gemstones, other color gemstones treatments are: lattice diffusion, fracture filling with oil / resin, leadglass and dyeing. Any statement on geographic origin is an expert opinion based on the observation of intact inclusions. Any mounting can limit the ability to see the characteristics and signs of treatment. The valuation refers to a recommended retail price (RRP) and in any case does not function as a guarantee or warranty.
